

NexaOne AI: Developer API Documentation

Version: 1.0.0

Base URL: <https://nexaone-ai.onrender.com/>

Authentication: Clerk Auth (Header: [Authorization: Bearer <clerk_token>](#))

1. Overview

NexaOne AI provides a suite of generative AI tools including text generation, image creation, and real-time search capabilities. This documentation outlines the endpoints available for integrating these AI services into your applications.

2. Core AI Services

2.1 AI Assistant (Chat)

Engage with a general-purpose AI model for conversational assistance.

- **Endpoint:** [POST /assistant](#)
- **Provider:** Groq / Google Gemini

Payload:

JSON

```
{  
  "prompt": "Explain quantum computing in simple terms.",  
  "history": []  
}
```

-

Response:

JSON

```
{ "text": "Quantum computing is..." }
```

-

2.2 AI Image Generator

Generate high-fidelity images from text prompts.

- **Endpoint:** [POST /image-gen](#)
- **Provider:** Hugging Face (Stable Diffusion)

Payload:

JSON

```
{ "prompt": "A futuristic city with neon lights, 4k, cinematic" }
```

-

Response:

JSON

```
{ "imageUrl": "https://storage.nexaone.ai/img_01.png" }
```

-

2.3 Email & Article Writer

Generate professional long-form content.

- **Endpoint:** [POST /write](#)

Payload:

JSON

```
{  
  "type": "email", // or "article"  
  "topic": "Resignation letter",  
  "tone": "professional"  
}
```

-

Response:

JSON

```
{ "content": "Dear Manager, please accept this email as..." }
```

-

2.4 AI Search Browser

Perform real-time web searches using AI to summarize results.

- **Endpoint:** [POST /search](#)
- **Provider:** Serper.dev

Payload:

JSON

```
{ "query": "Current stock price of NVIDIA" }
```

-

Response:

JSON

```
{ "summary": "As of today, NVIDIA is trading at...", "sources": ["link1", "link2"] }
```

-

3. System Integration & Infrastructure

Service	Provider	Purpose
Database	Neon (PostgreSQL)	Stores user data, chat history, and SaaS settings.
Auth	Clerk	Handles user sign-in, sign-up, and session management.
Payments	Razorpay	Manages subscriptions and credit top-ups.
Real-time	LiveKit	Powers HD video calling and AI voice interaction.

4. Implementation: Fetching Data

Use the following standard pattern to call the NexaOne AI server from your frontend.

Example: Fetching AI Assistant Response

JavaScript

```
const fetchAIResponse = async (userPrompt) => {
  try {
    const response = await fetch('/api/assistant', {
      method: 'POST',
      headers: {
        'Content-Type': 'application/json',
        // 'Authorization': `Bearer ${clerkToken}` // If required
      },
      body: JSON.stringify({ prompt: userPrompt }),
    });

    if (!response.ok) throw new Error('Network response was not ok');

    const data = await response.json();
    return data.text; // Displays the AI response
  } catch (error) {
```

```
    console.error("Error fetching AI response:", error);  
  }  
};
```

5. Security & Rate Limits

- **API Keys:** All sensitive keys (Groq, Google, Razorpay) are managed on the server-side via `.env` and are never exposed to the client.
- **Rate Limiting:** Free tier users are limited to 50 requests per day across all tools.
- **Data Protection:** All database connections use `sslmode=require` to ensure encrypted data transit.
